

Our Decorating Colours may be used, with few expectations, at temperatures from 980°C up to 1180°C under normal firing conditions, as well as under fast-firing conditions.

Their elaboration upon a common base permits unlimited mixing with one another and in any proportion, thereby offering a wide field of application. Working with the appropriate medium, our Decorating Colours are ideal for a clear application of the colour by screen-printing or spraying methods and is just as suitable for brush or stamp painting.

An essential characteristic is the high intensity of our Decorating Colours which can be reduced with D 5376 transparent colour. Smooth pastel shades are obtained by mixing D 5311 white with the selected colour.

DECORATING COLOURS (at temperatures from 980 °C up to 1180 °C)	
PRODUCT	COLOUR
D 5376	Transparent
DT 5882	White

D 5301	Basalt Grey
D 5375	Black

Our new Decorating Colours can be distinguished due to their excellent attributes which are in harmony with current technical demands:

- ultra-fine
- high colour intensity
- lead-free
- suitable for temperatures from 980°C to 1200°C under traditional firing conditions as well as fast-firing.

These new Decorating Colours are lead-free and therefore highly recommendable for use in earthenware and tableware industry. In the tile industry these Decorating Colours offer - with their ultra-fine particle size and their very high intensity - prime conditions for application in fine-mesh screen-printing. These Decorating Colours are all supplied in powder form and can be freely mixed with one another.
